

Week of May 14 to May 20, 2026

What got done, what is in progress, and the current dashboard state.

For: Jordan **From:** Shela **Period:** May 14 to May 20, 2026 **Generated:** May 21, 2026

Biggest signal this week: **traffic spiked to 87.7K users** for May 14 to May 20, up from 17.1K the prior week, with **90.1K sessions, 118.0K views, 16 booked calls, and 33 created accounts**. On the work side, the four-post TIN/EIN batch is live, Cobalt CLI video assets and product audit are ready, and Working Planet launch expectations are framed.

Dashboard Summary

- **Website Traffic** jumped to 87.7K total users, 90.1K sessions, and 118.0K views. This is a +70.4K user delta versus the prior completed week.
- **Conversions** improved with the larger traffic base: 16 booked calls and 33 created accounts, compared with 8 and 26 last week.
- **Bounce Rate** improved to 55.95%, down from 74.14% last week. Better traffic quality, page mix, or campaign mix may be contributing.
- **Domain Rating** remains on the OpenPageRank scale at 3.27, integer 3, checked May 21.
- **AI Visibility** baseline remains 46.8% combined mention rate across 154 prompts, with 72 prompts cited by at least one engine.
- **Newsletter** data is current through Apr 30, with the latest tracked edition at 46.64% open rate and 278 unique opens.
- **YouTube** dashboard is current through the Apr 23 export: March had 4,876 views, 14 new subscribers, 13 unsubscribes, and +1 net subscribers.

Completed This Week

TIN/EIN blog batch published

DONE

- **Four Cobalt posts are live:** EIN first-step, state-by-state EIN gaps, EIN vs TIN, and TIN matching for IRS B-notice prevention.
- **Publish QA passed:** live pages returned HTTP 200, H1s matched, hero sections rendered, FAQ sections rendered, and tables displayed correctly.
- **Tracking was updated:** the Blog Content Database and Master Blog Inventory were read back with Published status and Webflow IDs.

Sources: [EIN first-step](#) | [state-by-state EIN](#) | [EIN vs TIN](#) | [TIN matching](#)

Cobalt CLI video assets and product audit prepared

DONE

- **Seven terminal-style feature demos were rendered** for auth, config, SOS, OFAC, TIN, full verification, and limits.
- **Safe live CLI checks were run** before the videos were judged: help surfaces, auth, config, SOS test mode, pending jobs, OFAC, TIN, full verification, and limits.
- **Product audit found no catastrophic falsehoods**, but recommends tightening screenshot, UCC, OFAC, TIN, and full-verification wording before public publishing.

Status: assets and audit are ready for Jordan review before publishing.

Working Planet launch analysis prepared

DONE

- **The paid marketing workbook was reviewed** against prior Working Planet context, CTA tracking work, and the asset-gathering package.
- **Key read:** the proposed \$30K monthly budget is closer to early pipeline learning than realized-MRR proof because of Cobalt's sales latency.
- **Expected deliverables are now framed:** tracking map, campaign architecture, creative and landing-page matrix, weekly performance readout, quality review, and monthly model refresh.

Status: discussion-ready for launch expectations, timeline, and operating-detail gaps.

In Progress

Cobalt CLI video publishing pass

IN PROGRESS

- **Next decision:** whether the demos are for engineering enablement, social clips, or both.
- **Before publishing:** apply the audit wording fixes and re-render corrected videos.
- **Optional follow-up:** add a workflow README or one longer enablement video if this is meant for technical buyers.

Working Planet launch readiness

IN PROGRESS

- **Need to align internally** on what early success means: qualified pipeline, demo quality, or realized MRR.
- **Need the first evaluation timeline:** early signal window, optimization window, and when budget allocation should change.
- **Thin areas to watch:** channel allocation, conversion definitions, creative ownership, landing-page plan, and reporting cadence.

✓ What's Working

- **Blog Organic Search** typically bounces below 50% (B2B benchmark is 60–75%) — search-sourced readers are engaged.
- **Funnel pages convert:** /dashboard, /login, /create-account all bounce below 10%.
- **AI Search has the lowest bounce rate** of any channel — small volume, high quality.

⚠ What to Fix

- **/directory*** bounces near 98% — investigate whether these pages are bot traffic or broken.
- **Homepage bounces at 75%** — warm Direct visitors leaving.
- **Blog Direct traffic** bounces at 91% — likely bots or misdirected, not real readers.
