

Week of May 7 to May 13, 2026

What got done, what's in progress, current dashboard state.

For: Jordan From: Shela Period: May 7 to May 13, 2026 Generated: May 14, 2026

Traffic recovery week. **Website traffic rebounded to 17,101 users** versus 12,044 prior week, +42%, reversing the prior two weeks of compression. **Conversions held steady** at 8 booked calls and 26 created accounts on the larger traffic base. **Cobalt CLI `fv status` bug shipped end-to-end**: bug filed Tuesday, Jordan published v0.4.1 Thursday, blog tutorial swapped back to the standard flow. **Broker Fair SOS Reliability Index approved by Jordan** ("Ship it"). **Working Planet partner onboarding invitation dispatched**. GTM container access path for Market Acumen Kent handed off to Jordan for the app domain container.

Dashboard summary

- **Website Traffic** recovered to 17,101 total users this week (May 7 to May 13) vs 12,044 the prior week. Net positive delta of +5,057 users week over week.
- **Conversions** held at the higher absolute level. 8 booked calls (flat), 26 created accounts (vs 28 prior). CTA refinements continue to support the steady-state.
- **Bounce Rate** 74.1%, up from 68.4% prior week. Likely volatility on the larger traffic base, worth watching next week before reading as a trend.
- **Domain Rating** OpenPageRank 3.27 (integer 3), no change since last refresh. Tracker remains on the post-Ahrefs scale.
- **AI Visibility** 47.4% combined mention rate baseline across 154 prompts and 9 engines, no change.
- **Newsletter** open rate trend steady, latest Beyond Banks editions tracking above 50%.
- **YouTube** subscriber motion and engagement holding, no trend break vs prior month.

Completed this week

Cobalt CLI v0.4.1 bug fix shipped end-to-end

DONE

- **Bug filed Tuesday May 13** on #marketing thread: `cobalt fv status` returned "action is required" on v0.4.0 even though `cobalt fv start` worked. Customer could trigger a paid full verification but not retrieve the result through the documented status command.
- **Jordan published v0.4.1 to npm Thursday May 14**. Retested: `cobalt fv status <searchGuid>` now returns a clean JSON envelope. Bug resolved.
- **Blog tutorial swapped back to the standard `fv status` flow**. Live at blog.cobaltintelligence.com/post/how-to-use-cobalt-cli. The tutorial now teaches the recommended path again instead of the webhook-only workaround.

Sources: #marketing May 13 (bug filed) · #marketing May 14 (retest on v0.4.0) · #marketing May 14 (v0.4.1 confirmed working)

Broker Fair SOS Reliability Index

approved

DONE

- **Revised report submitted to Jordan May 11** for sign-off. First push missed the actual content changes, re-pushed May 13 with the correct version.
- **Jordan approval:** "Yes, love this. Ship it." Live at cobalt-intelligence.github.io/reports/broker-fair/sos-reliability-index.html.
- **QR codes verified** to survive future report edits, confirmed with Patricia for the merch print run.

Sources: [#marketing May 11 \(revised report submitted\)](#) · [#marketing May 13 \(correct version live\)](#) · [DM Patricia May 11 \(QR codes verified\)](#)

GTM container access handoff for Market Acumen

DONE

- **Identified the second GTM container** Kent needs: `GTM-KC5XH8LP` is tied to `app.cobaltintelligence.com` and sits under Jordan's account, not Shela's. `GTM-KQD7J4K6` (main site) is already done.
- **8-step procedure handed to Jordan** for adding `tagmanager@clients.marketacumen.com` with Publish role on the app container, so ConversionRuler can split tag coverage across both surfaces.
- Working Planet acknowledged the late reply and confirmed the next invitation was sent.

Sources: [#marketing May 9 \(access path to Jordan\)](#) · [#workingplanet-cobalt May 13 \(invitation sent\)](#)

In progress

Working Planet \$30k/mo proposal review

IN PROGRESS

- **Initial proposal received** with 53 target keywords across 6 intent clusters and a phased ramp (\$10k → \$30k MRR).
- **5-question reply drafted** covering keyword overlap with existing rankings, projected CPC ranges, attribution mechanics, and the LTV math behind the proposed spend tier.
- **Pre-signing data pulls queued:** 12-month closed-won deal averages from Close, GSC 28-day for the 53 WP keywords (double-spend check), Master Blog Inventory cross-reference for keyword clusters where we already have landing pages.
- **Stripe to Close MRR sync gap** remains the launch blocker for the June 1 start. Engineering ownership question for Jordan.

Broker Fair event preparation

IN PROGRESS

- **SOS Reliability Index shipped** as the second Broker Fair report (covered above in Completed).
- **Pamphlet, gifts, merch tracking** continues with Patricia. QR-code-on-print pathway validated this week.
- **Awaiting the list of attendees** so we can start the LinkedIn outreach ahead of the event.

BEST BLOG CHANNEL

Organic Search

103 sessions

✓ What's Working

- **Blog Organic Search** typically bounces below 50% (B2B benchmark is 60–75%) — search-sourced readers are engaged.
- **Funnel pages convert:** /dashboard, /login, /create-account all bounce below 10%.
- **AI Search has the lowest bounce rate** of any channel — small volume, high quality.

⚠ What to Fix

- **/directory*** bounces near 98% — investigate whether these pages are bot traffic or broken.
- **Homepage bounces at 75%** — warm Direct visitors leaving.
- **Blog Direct traffic** bounces at 91% — likely bots or misdirected, not real readers.
