

Week of July 17 to July 23, 2026

Meeting report for Jordan: current marketing dashboards, Working Planet lead quality, and content performance.

For: Jordan From: Shela Period: July 17 to July 23, 2026 (ISO week 30) Generated: July 23, 2026

Biggest marketing signal this week: **the Meta lead form now requires work email addresses to lift lead quality**, with Sarah confirming the change is done and Jordan noting recent booked calls were already coming from work emails. Website volume held near **6.2K users** for July 16 to July 22, down about 258 from six days prior, with **7.1K sessions**, **10.1K views**, **3 booked calls**, **32 created accounts**, and bounce at **61.0%**.

Executive Summary

- **Total Users:** 6.2K for the week, down about 258 from six days ago.
- **Sessions:** 7.1K, with page views at 10.1K.
- **Created Accounts:** 32 for the window.
- **Booked Calls:** 3 for the window.

Highlights

- The Meta lead form now requires work email addresses to lift lead quality; Sarah confirmed it is done and recent booked calls were already from work emails.
- Working Planet switched the Meta lead form to a rich creative format so it can explain more about Cobalt before submission, aiming for more completions.
- Website volume held near 6.2K users, down about 258 from six days ago, with 7.1K sessions, 10.1K views, and bounce at 61.0%.
- AI visibility reached 64.9% across the latest AEO run, with Cobalt cited in 100 of 154 prompts across three engines.
- Beyond Banks has a 54.2% average open rate across the five latest editions, with the Jul 23, 2026 edition at 50.2%.

Dashboard Summary

- **Website Traffic** is continuously going down due to the directory state entity page changes: users held at 6.2K, down about 258 from six days ago, with sessions at 7.1K, views at 10.1K, and bounce at 61.0%.
- **Traffic Insights** confirms the split: /directory* pages still bounce near 98% and the homepage at 75%, while blog organic search and the funnel pages (/dashboard, /login, /create-account) stay engaged below 50% and below 10%.
- **Domain Rating** holds at 3.27/10 on the OpenPageRank scale, checked July 23, no change since the March 28 reading.
- **AI Visibility** is 64.9% combined mention rate on the latest AEO run, 100 of 154 prompts cited across 3 engines.
- **AEO engines** stay led by Perplexity at 63.6% cited, with Gemini second at 24.7% and OpenAI at 22.1%, so most of the visibility still leans on a single engine.
- **Newsletter** has a 54.2% average open rate across the five latest Beyond Banks editions, with the Jul 23, 2026 edition at 50.2%.
- **YouTube** subscriber motion leads: subscriber growth is accelerating while unsubscribes are down 31.6%, so net adds are the number to keep pushing.

Close CRM Lead Quality

- **Paid-attributed leads:** 15 new paid-attributed leads this week out of 41 new leads total; the recent 30-day paid cohort is 80 leads, 8 of them carrying a Working Planet style paid source signal.
- **Opportunity conversion:** the recent paid cohort holds 29 opportunities, 7 of them new this week and 5 Working Planet likely, with a type mix of 25 active and 4 won.
- **Opportunity status mix** (Patricia-maintained pipeline truth): 11 Demo No Show, 5 Demo Booked at 10%, 4 Active Customer, 4 Won at 100%, 3 Post Demo Positive at 50%, 1 Initial Contact at 5%, and 1 Post Demo Luke or Negative at 5%.
- **Meetings:** across 20 recent paid meetings, 17 completed, 2 upcoming, and 1 declined by lead, plus 1 possible no-show or stale meeting status.
- **Fit tagging** (Jordan's call fit/not-fit tag): 1 paid lead fit-tagged and 1 flagged Misfit, a bad-fit signal on paid spend.
- **Net signal:** 12 negative or lost opportunity signals against 11 positive or won, so the recent paid cohort is running roughly even between no-shows and advancing opportunities.

Completed This Week

Website and marketing: Meta lead form upgraded and gated to work emails DONE

- **Working Planet switched the Meta lead form to a rich creative format** so the form can explain more about Cobalt before submission, giving prospects more context on the product before they hand over their details.
- **The team expected the richer format to drive more form completions** and planned to monitor whether the added volume actually translated into qualified leads rather than raw sign-ups.
- **The upgraded form did lift submissions, but it also drew more personal email addresses**, so Working Planet proposed and then applied a change to require work email addresses to improve lead quality.
- **Sarah confirmed the work-email requirement is now live on the form**, and Jordan confirmed that recent booked calls were already coming from work emails, which supports the gate rather than working against it.
- **Net effect:** the paid social funnel now pairs more top-of-funnel volume with a work-email gate to protect lead quality; the team will keep watching the volume and qualification tradeoff week over week.
