

Week of May 28 to June 3, 2026

Meeting report for Jordan: current dashboards, shipped items, and open handoffs.

For: Jordan **From:** Shela **Period:** May 28 to June 3, 2026 **Generated:** June 4, 2026

Biggest signal this week: **traffic cooled after the May spike, but conversion intent is still present.** May 28 to June 3 closed at **21.6K users, 25.4K sessions, 4 booked calls, and 20 created accounts.** The main work update is the blog attribution handoff: Close custom fields and demo-page UTM passing are set up, and Jordan's side is needed for production deploy, SavvyCal-to-Close mapping, and signup-flow attribution.

Dashboard Summary

- **Website Traffic** is back down from the prior spike: 21.6K users, 18.6K new users, 25.4K sessions, and 22.1K pageviews for May 28 to June 3.
- **Conversions** improved on booked calls from the prior week, 4 calls vs 2, while created accounts moved from 22 to 20.
- **Website Page Performance** should be read as normalized traffic after two very high May weeks, not as a new growth trend yet.
- **Domain Rating** remains on the OpenPageRank scale at 3.27/10, checked June 4. OpenPageRank is a different scale from the old Ahrefs DR.
- **AI Visibility** is 44.16% combined mention rate from the May 24 run: Cobalt was cited in 68 of 154 prompts, with 8 cited wins and 24 zero-rate gaps.
- **AEO wins** are strongest around real-time Secretary of State API, Cobalt vs Middesk, business verification API, multi-state SOS coverage, and Cobalt pricing prompts.
- **AEO gaps** are still high-intent state lookup and legitimacy prompts, including registered-business checks, Texas, New York, and step-by-step SOS API queries.
- **Newsletter** KPI source is now refreshed from Beehiiv through Jun 4: Deposit-Funded Fintechs Move to Undercut Alt Lenders sent to 650, produced 285 unique opens, 43.81% open rate, 0 unique clicks, and 2 unsubscribes.
- **Newsletter trend** across the last 5 editions is 378 average unique opens and 50.9% average open rate; the May 26 CFSB and Jun 2 Axiom editions had the strongest recent clicks with 6 unique clicks each.
- **YouTube** is current from Shela's corrected Content Type export for Mar 6 to Jun 4: 11,759 views, 7,041 engaged views, 105.0 watch hours, 23 Shorts published, and net -12 subscribers.

Completed This Week

Blog attribution foundation DONE

- **Close lead fields are created** for UTM Source, UTM Medium, UTM Campaign, and UTM Content.
- **The demo page is updated** so blog CTA links pass those UTM values into the SavvyCal demo-booking flow.
- **The handoff is now clear:** this lets us identify when a Close lead came from a blog CTA and which post drove it.

Standing dashboards refreshed

DONE

- **SEO KPI, Traffic Insights, AEO, Newsletter KPI, and YouTube KPI** were refreshed before this report was rebuilt.
- **The current weekly row is live** for May 28 to June 3: 21.6K users, 25.4K sessions, 4 booked calls, and 20 created accounts.
- **The five reference screenshots below** are the current meeting view, with Trial to Customer intentionally excluded.

Newsletter KPI current through Jun 4

DONE

- **102 editions are tracked** in the Newsletter KPI dashboard, with unique opens as the primary metric.
- **Latest edition:** Deposit-Funded Fintechs Move to Undercut Alt Lenders, 650 sent, 285 unique opens, 43.81% open rate, 0.00% CTR, and 0 unique clicks.
- **Recent performance:** last 5 editions averaged 378 unique opens and 50.9% open rate after the Beehiiv refresh.

YouTube Analytics exported from Studio

DONE

- **Current export period:** Mar 6 to Jun 4, 2026, from Shela's corrected YouTube Studio Content Type export.
- **Total performance:** 11,759 views, 7,041 engaged views, 105.0 watch hours, 30,289 impressions, 2.87% CTR, 36 subscribers gained, 48 lost, and net -12 subscribers.
- **Content type split:** Shorts produced 8,972 views, 4,255 engaged views, 30.6 watch hours, 23 videos published, and net +7 subscribers; Videos produced 2,813 views, 2,813 engaged views, 74.9 watch hours, and net +14 subscribers.
- **Subscriber read:** the subscriber drag is not Shorts or Videos. The 'Other' bucket shows net -33 subscribers, which is what pulls the account to net -12 for the period.

In Progress

Jordan-side attribution handoff

IN PROGRESS

- **Production deploy** is the next step for the demo-page attribution update.
- **SavvyCal-to-Close mapping** still needs to connect the passed UTM fields into Close reliably.
- **Create-account attribution** is still open for the signup flow, especially leads that bypass demo booking.
